## RELEVANT EXPERIENCE

---

### CPP Virtual Reality Lab

Pomona, CA

*Administrator (Paid-position)*

Aug 2018 - Present

- Manage several projects with different teams for development and presentation to industry sponsors.
- Mentored students by hosting workshops to teach students how to use Unity to develop in VR and AR.
- Maintain inventory of lab equipment (HTC Vive Pro, Oculus Rift, Microsoft HoloLens, VR-ready computers) and handle checkout to lab members.

## EDUCATION

---

### California Polytechnic University, Pomona

Pomona, CA

*Bachelor of Science, Computer Science*

Expected May 2019

GPA: 3.55, Dean's List all quarters

## PROJECTS

---

### Spellbreaker VR

Mar 2019 - Present

- Currently developing a singleplayer VR game made with Unity and C#. The player will have to slash through a flurry of magic projectiles aimed at them using their swords.

### Isolation

Apr 2019 - May 2019

- Created a player vs computer console game coded in Java. The player has to outmaneuver the computer by trapping it with previously made moves.
- Implemented a min-max algorithm utilizing alpha-beta pruning with iterative deepening that the computer uses as a heuristic to make its moves.

### VR Wildfire

October 2018

- Worked on an existing VR research project made with Unity and C# that simulates the player being in a wildfire. The project records the users actions and the time taken to them.
- Debugged critical errors by analyzing and rewriting existing code from scripts.

### Below Haven

Apr 2018 - June 2018

- Collaborated in a team of 5 to create a 2D game in Unity using C#. The player has to travel underground to discover treasure and riches, but the levels and enemies get harder as they venture further below.
- Wrote scripts for player movement, interactions with enemies, and audio playback.

### VR Combination and Permutation

Feb 2018 - May 2018

- Created a VR research project made with Unity and C# that tests the player's understanding of math concepts in an escape-room environment. Statistics are given for each puzzle to display the number of possible guesses to the solution.

## SKILLS

---

- **Languages:** Java, C#, HTML, CSS, Javascript, Python, C++
- **Tools:** Unity, Visual Studio, Eclipse, NetBeans, Github Desktop, PuTTY, Android Studio
